The Lint

With the **CORADIA-Family** (**L**eichter **I**nnovativer **N**ahverkehrs **T**riebzug (DMU)) presents Bombardier a train-conception, which combined the low cost and easy on the resources unitized construction with individual possibility of the customer.

There are two different LINT: LINT27 and LINT41

About this trains you can read something in the following information. For more information visit the homepage of bombardier or the railway companys.

In the construction office of Bombardier you also will find the Lint 53, Lint56, Lint71, Lint81, and an EMU Lint. The future will show us, if these types will be realised.

The traintyp is in operation as the BR 648 of the DBAG and also in operation by many Privat-Railways, such the (NWB) Northwest-Bahn, or the AKN (Altona-Kaltenkirchener-Eisenbahn) in the North of Germany.

The BVE-engine-driver can choice between two panel versions

1. AKN-Version
2. DBAG-Version (BR 648)

Panel

You can change the two different panel versions with the program panel.exe, which you will find in the train folder.

I wish, you will enjoy my train.
